## **PROFESSIONAL SUMMARY**

As a junior full stack developer, I am a motivated and detail-oriented professional with a strong foundation in both front-end and back-end development. I have experience with various programming languages, frameworks such as HTML, CSS, Bootstrap and Javascript. My skills include implementing responsive and user-friendly web applications, creating and managing databases and integrating third-party APIs. I am comfortable working in a collaborative team environment, and possess excellent communication and problem-solving skills. With a strong desire to grow, I am committed to staying up-to-date with emerging technologies and best practices. I am excited to contribute my skills and enthusiasm to a dynamic development team and to help drive the success of projects.

## **EDUCATION**

**Jomo Kenyatta University of Agriculture and Technology**

**December 2022**

Business Information Technology

**eMobilis Technology Training Institute**

Full stack software and android development

## **SKILLS**

**Technical skills:** HTML, CSS, Bootstrap, Javascript, Python, Django, Kotlin, SQLite

**Soft skills:** Problem solving, Teamwork, Time management, Collaboration

## **PROJECTS**

**Mentor Website** | HTML, CSS, Bootstrap, Python and Django.

- Mentor website is a website for any kind of education, online learning center, academy and any activities related to education. A new user must first register for them to interact with the website and if one is an existing user they will be required to login first. I used Django forms to create the login and register page. After login the user will be redirected to the homepage which gives a brief introduction of the online learning center. The about us section gives detailed information about the online learning center. The courses section lists all the courses offered in the learning center and the trainers section which showcases the trainers and what they teach. There is also a contact page where users can fill their name, email and leave their message. Finally we have a logout page for the user to logout.

## **Digital clock** |HTML,CSS,Javascript

- It is a type of clock that displays the time in numerals in 12 hour format.
